

Arboretum Eastern Drive

Chaska, MN

Integrity Built

This project was a 1-mile road supporting 2-way traffic with 11-foot wide bituminous lanes with rural 2-foot gravel shoulders rated for heavy duty traffic with a 20 year design life.

The road will provide an internal connection between current campus and Eastern campus expansion including the Farm Garden and Bee Discovery Center projects.

At the Creek crossover there is complete pre-cast bridge system with pre-cast foundations, aluminum arch, head wall, and wing walls. This system has the advantage of rapid installation, lower material costs, and lower maintenance costs; all with proven design methodology and reliability.

Client - University of Minnesota Landscape Arboretum

Architect - Solution Blue, Inc.

Construction Cost - \$1.2 Million

Project Size - 1 mile, two lane asphalt road

Loeffler Role - General Contractor
